

Online Infection Prevention and Control

COURSE DURATION:

60 Minutes

TARGET AUDIENCE:

- Care Sector Staff
- NHS Staff

AVAILABLE IN:

- Audio (speakers or headphones)

DELIVERED VIA:

- Internet

Independently certified as conforming to universally accepted Continuous Professional Development (CPD) guidelines

Rising levels of health care associated infection (HCAI) have gained prominence in the media and in politics, leading to great public concern. All care organisations and their staff have a duty of care to their service users, and preventing infection forms part of that duty of care.

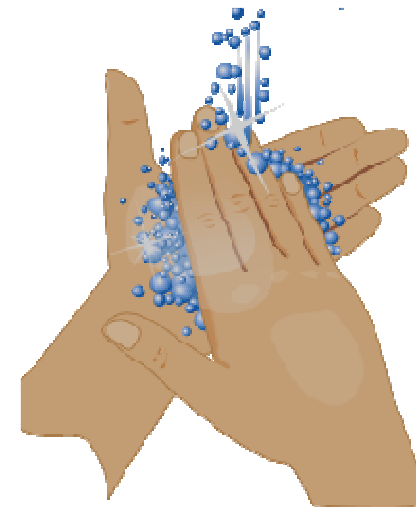

Written by experts on the Infection Control teams within Bradford City and South & West PCTs, this online course will help Care organisations to fulfil their requirements because staff members will have gained an overview of the key elements of infection control.

They will also have gained an understanding of how infections might occur and how good practice can reduce their likelihood and prevent their spread.

On successful completion of this online course candidates can print their certificate directly from the computer.

This course covers the following topics:

- Learning Outcomes
- Overview
- Basic Microbiology
- Infection Control
- Handling Waste
- Understanding MRSA
- Understanding CDI
- Understanding Norovirus
- You and Infection Control
- Summary
